Language Resources and Evaluation

Dear Editors,

Please consider the enclosed manuscript, “ExecKG: A source-anchored executable grammar resource for GF 0025–2021,” as a full-length paper. The paper presents a resource that compiles all 572 grammar points of the Chinese national standard into 646 diagnostic units, each with a source-linked profile, a runtime binding, and contract tests. It separates inventory-wide compilation from behavioral validation and reports benchmark performance on 3,000 supplied candidates plus transfer to 244 author-written candidates.

The manuscript has not been published and is not under consideration elsewhere. Author-created tables are offered under CC BY 4.0 and the code under the BSD 3-Clause License. The public release is available at https://github.com/yyting2006-ai/lre_submission_20260926. The review package, named `ExecKG_LRE_supplement_20260926.zip`, contains identifiers, page anchors, hashes, rule traces, predictions, compiler inputs, and verification scripts. The wording of the standard and the handbooks, and the benchmark sentences, remain with the rights holders.
